# PageCraft

PageCraft（Marketplace 3.1.0）：为 Rovo 与自定义 agent 提供动作，以登录用户身份在 Confluence Cloud 创建或更新富文本页面（状态标记、面板、分栏布局、提及，以及 toc、children、pagetree 等允许名单宏）。Agent 内置 Create Page 只能输出 Markdown；PageCraft 把结构化章节转成 Confluence storage，并在你确认后以 asUser() 写入。应用本身不调用外部模型、不保存 LLM 密钥。可创建富文本页面、整页更新正文（新增标签不会删除已有标签；不移动页面、不改限制），以及获取会议纪要 / ADR / RFC / PIR 模板。不会更改内容限制或空间权限，也不能读写登录用户本身无权访问的内容。由自动化规则启动的 agent 不能调用创建或更新。应用跑在 Forge 上，无远程后端。免费版面向不超过 10 名 Confluence 用户的站点（$0）；超出后按 Confluence Cloud 费用的 10% 计费（Marketplace 标价，应用内不单独计费）。

PageCraft (Marketplace 3.1.0): Rovo and custom-agent actions that create or update rich Confluence Cloud pages — status lozenges, panels, column layouts, mentions, and an allowlist of macros such as toc, children, and pagetree — as the signed-in user. A custom agent's built-in Create Page skill can only emit Markdown; PageCraft turns structured sections into Confluence storage format and writes the page with asUser() after you confirm. The app does not call an external model and does not hold an LLM API key. Actions: Create rich page; Update rich page (replaces the entire body; adding labels does not remove existing labels; it does not move the page or change restrictions); and Get page template (meeting-notes, adr, rfc, or pir). It does not change content restrictions or space permissions, and cannot read or write anything the invoking user cannot already do. Automation-started agents cannot invoke create or update. Runs on Atlassian Forge with no remote backend. Free is $0 for Confluence Cloud sites with ≤10 Confluence users; Paid is 10% of Confluence Cloud above that cap (Marketplace listing price; the app does not bill inside the app).
