MeetingAction

MeetingAction（Marketplace 3.1.0）：从 Confluence 会议页面提取行动项和决议并建成 Jira 工作项，提供经办人与到期日建议，并在问题上显示会议来源面板。需同时安装到 Confluence Cloud 与 Jira Cloud。在会议页菜单（）➞ 应用中打开「提取行动项」，先审阅再确认创建；未确认不会建立问题。同一轮最多创建 20 条。可用「演示提取」（识别任务列表、标题及 Action / Decision / 待办 / 决议等标记，不调用模型）或「用 AI 提取」（使用 Atlassian 托管的 Forge LLM，页面正文不发往外部模型）。创建后，会议页会在页面属性与页脚评论中回链问题密钥，每个新问题显示指向该会议页的来源面板。应用跑在 Forge 上，无远程后端。免费版面向宿主产品不超过 10 名用户的站点（$0）；超出后按宿主产品费用的 10% 计费（Marketplace 标价，提取对话框内不单独计费）。

MeetingAction (Marketplace 3.1.0): Extracts action items and decisions from a Confluence meeting page and creates Jira work items, with assignee and due-date suggestions and a meeting-source panel on the issue. Install it on both Confluence Cloud and Jira Cloud. Open a meeting page, then page menu () ➞ Apps ➞ Extract action items (提取行动项). Review the list, choose a Jira project and issue type, and confirm; nothing is created until you confirm. At most 20 selected items are created in one run. Demo extract recognizes task lists, headings, and markers such as Action, Decision, 待办, and 决议, and does not call a model. AI extract uses Atlassian-hosted Forge LLMs; the page body is not sent to an external model. After create, the meeting page gets a back-link in page properties and a footer comment, and each new issue shows a meeting-source panel that links back to the page. Runs on Atlassian Forge with no remote backend. Free is $0 for sites with ≤10 users on the host product; Paid is 10% of the host product above that cap (Marketplace listing price; the app does not bill inside the extract dialog).
