SpaceBrief

SpaceBrief（Marketplace 2.2.0）：按空间生成 Confluence 周变更摘要草稿，覆盖创建、更新、评论的页面，以及在配置了关注标签或文件夹后的过期候选页。只做告知，不更改内容限制。入口：空间设置 → 集成 → SpaceBrief。可按空间启用，设置语言（English 或中文）、回溯天数（默认 7）、星期（UTC，默认周一），以及可选父页面、关注标签或用于过期检测的文件夹。可立刻「立即生成摘要」（以当前用户权限读取并只包含其可见页面）；定时任务按所选 UTC 星期运行（当天未发出则同周次日再试一次，使用应用账号）。摘要以草稿发布（标题形如 SpaceBrief — {space} — {YYYY-MM-DD}），需人工在 Confluence 中发布。可选使用 Atlassian 托管的 Forge LLM 撰写叙述；演示模式、未批准 LLM 模块或未返回摘要时改用模板。不发送邮件，无远程后端。定时任务仅在已授权安装上运行。免费版面向不超过 10 名 Confluence 用户的站点（$0）；超出后按 Confluence Cloud 费用的 10% 计费（Marketplace 标价，应用内不单独计费）。

SpaceBrief (Marketplace 2.2.0): Builds a weekly Confluence space change digest as a draft page — pages created, updated, or commented on, plus stale candidates when you configure watched labels or a folder. It informs; it does not change content restrictions. Open it from Space settings → Integrations → SpaceBrief. Enable per space; set language (English or 中文), lookback days (default 7), and weekday (UTC, default Monday), plus an optional parent page, watched labels, or a folder page id for stale detection. Run digest now publishes a draft immediately as you, including only pages you can already view. The scheduled run uses the app account on the weekday you pick (UTC); if that day does not publish, the next day in the same week tries once. The digest is left in draft status (title form: SpaceBrief — {space} — {YYYY-MM-DD}) for you to publish in Confluence. When demo mode is off and the llm module is approved, SpaceBrief can write a narrative with Atlassian-hosted Forge LLM; otherwise the same facts are published as a template. It does not email the digest and has no remote backend. The scheduled daily trigger runs only when the installation is licensed. Free is $0 for Confluence Cloud sites with ≤10 Confluence users; Paid is 10% of Confluence Cloud above that cap (Marketplace listing price; the app does not bill inside the app).
