

## 05-创建子任务判断父任务类型

### 场景

根据问题类型来判断是否能创建子任务，创建什么样的子任务

增加validate，增加Custom script validator

```
import com.opensymphony.workflow.InvalidInputException;
import com.opensymphony.workflow.WorkflowException;
log.info("parent="+issue.parentObject.getIssueTypeObject().name);
if(issue.parentObject.getIssueTypeObject().name=="Story"||issue.parentObject.getIssueTypeObject().name=="故事"){
    log.info("parent="+issue.parentObject.getIssueTypeObject().name);
}else{
    throw new InvalidInputException("只允许在故事下建子任务");
}
```
