

## 004-任务工时偏差

实际任务工时

```
Sum(  
  Filter(  
    Descendants([Issue]. CurrentMember, [Issue]. [Issue]),  
    [Measures]. [Hours spent]>0  
  ),  
  ([Measures]. [Hours spent],  
  [Time]. CurrentHierarchy. DefaultMember)  
)
```

预估任务工时

```
Sum(  
  Filter(  
    Descendants([Issue]. CurrentMember, [Issue]. [Issue]),  
    [Measures]. [Hours spent]>0  
  ),  
  ([Measures]. [Original estimated hours],  
  [Time]. CurrentHierarchy. DefaultMember)  
)
```

任务工时偏差

```
[Measures]. [实际任务工时] / [Measures]. [预估任务工时]
```

按实际上线日期做测量

CASE WHEN

[Measures]. [Issues with 实际上线日期]>0

THEN

Sum(

Filter(

DescendantsSet([Issue]. CurrentHierarchyMember, [Issue]. [Issue]),

--condition to filter out the relevant issues

[Measures]. [Issues with 实际上线日期]>0

),

--numeric value to sum

([Measures]. [Hours spent],

--the next row resets the Time dimension

[Time]. CurrentHierarchy.DefaultMember)

)

END
